

Powershell

SIESTA executable can be run in serial in powershell by typing,

```
$ Get-Content input.fdf | & "$env:SIESTA" | Out-File output
```

where `\$env:SIESTA` is the environmental variable pointing to the SIESTA executable.

You can set environment variable from terminal,

```
$ $env:SIESTA="<path-to-siesta-exe>"
```

Command prompt

To run the SIESTA executable in parallel type,

```
> "<path-to-siesta-exe>" < <input.fdf> > <output>
```
